

Langstone Coastal Defence Scheme

Ground Investigations September 2021

Aerial image annotated to show extent of GI works

Stay Up To Date

Ground Investigation (GI) works are scheduled to take place in Langstone week commencing Monday 13th September 2021, in conjunction with the Langstone Flood and Coastal Erosion Risk Management (FCERM) Scheme. Works will be undertaken by Structural Soils Ltd.

These works will last for approximately 3/4 weeks and will involve undertaking a series of boreholes and trial pits along the Langstone frontage to obtain further detail on the ground conditions, building upon previous investigations conducted in 2018.

The samples will be analysed and inform the detailed design currently being undertaken by Havant Borough Council for sea defences along the Langstone seafront.

During this period of works:

- Plant will be in operation around the frontage.
- A site compound will be set up in the corner of The Ship Inn's car park.
- Small vegetation clearance will be undertaken at several sample locations. These works will be supervised by a qualified and experienced Ecological Watching Brief.
- Both the works area and site compound will be

fenced off for the duration of the works.

- There may be localised impacts on access to the foreshore and the temporary closure of the public footpath for short periods of time.
- We ask that you please remain vigilant when using the footpath, particularly when plant and materials are being delivered to site.

Given the potential for archaeological finds, an archaeological contractor will be present on site to undertake a watching brief of the works.

All necessary Consents and Licensing have been obtained ahead of the works.

Borehole sampling undertaken at Langstone in September 2018

Trial pit undertaken at Langstone in September 2018
